

Coping With Business Changes

Coping with business changes as your company hits milestones can be complicated, especially when you factor in your IT environment. There are so many moving parts to worry about that it can be overwhelming to carry on with daily core business tasks while addressing your company's new IT needs. Anytime that your business undergoes a change, that's an ideal time to reassess and upgrade your IT environment. Make your business changes easier by partnering with an IT outsourcing provider such as AlphaScan.

Building remodel

An IT support company like AlphaScan can help you assess your current and future business IT needs and help you incorporate new technology tools into your remodel. Things to consider during remodel include:

- **Electrical Wiring-** IT services providers can help select the right wiring for your electrical consumption needs. Consider separate circuits for your major IT tools like printers and copiers to avoid power fluctuations and upgrade wiring in server rooms to 220V.
- **Cooling-** An IT consulting company can help you assess your IT environment cooling needs so that you can incorporate them into your remodel.
- **Wireless connectivity-** Let an IT support company create a wireless network for your company instead of rewiring your existing network. This will save your company money and give you the flexibility to work anywhere in your building.
- **Physical Security-** IT companies such as AlphaScan can help you improve your business' security to protect your IT investments. Installing electric locks on server rooms and cameras at your front desk is affordable and easy during a remodel.

Business relocation

Relocating your business is great time to reevaluate how your company uses technology. IT outsourcing providers such as AlphaScan can help you create an IT environment that is flexible, affordable, and easy to support. IT choices to consider include the following:

- **Hosted solutions-** Instead of moving servers, consider hosted solutions which can decrease your needs for server storage space and reduce your electrical bill. IT support companies can help you choose the best hosting solutions to meet your business' needs.
- **Wireless-** Moving into a new space is an opportunity to consider wireless networking. IT services providers can help you create a secure wireless network that is accessible to you and your staff.
- **Telephony-** IT services providers can help you choose a Voice over IP (VoIP) solution to replace a more expensive, conventional, wired phone system.

Corporate restructuring

Whether you are opening a second office or are completely restructuring your business, let an IT consulting company such as AlphaScan help you choose the right IT tools to enhance your IT environment and support your core business tasks. Things to consider include:

- **Inter-office connectivity-** An IT consulting firm can help you identify your communication needs and make suggestions about how to structure your corporate IT environment.

- Hosted solutions- IT outsourcing providers can help you decide if hosted solutions such as Hosted Exchange, Hosted SharePoint, or Salesforce.com are right for your restructured company. Since hosted solutions are typically billed on a per-user basis, you have the potential to save a noticeable amount of money.
- Virtualisation- Virtualising your servers can reduce your costs for hardware. IT support companies like AlphaScan can help you choose the best virtualisation solution for your corporate needs.
- Remote Access- Access to centrally stored data needs to be available to everyone in your company, regardless of their location. IT companies like AlphaScan can help you choose and implement a remote access solution to meet your corporate needs.
